

## Events tasks:

- 1) Event 1: team tech trivia/debate, Event 2: video gaming competition,

Event 3: workshop on crypto mining/ cryptocurrency

- 2) Team tech trivia/debate could be held in any seminar room available, wherein the teams of 3 or 4 would be made to sit together as the trivia rounds proceed and as several teams get eliminated, without any space problems.

Video gaming competition could be held online, wherein players can bring their own teams or teams can be selected by the committee themselves. On games such as Valorant, the competition can be carried out from the participants' houses and can be kept track of online as well. It would be a more successful event when conducted online as arranging equipment for participants would be a task.

Workshop on crypto mining / cryptocurrency could also be conducted in a seminar room or a class room available, depending on the registrations done.

- 3) Team tech trivia/debate could be based on some of the hottest topics

or themes, such as IOS vs Android(apple), is AI problematic for jobs, is tech the opposite of nature, trivia on general knowledge

of inventions and founders of some of the biggest tech companies etc.

For video gaming competition, some unique rules such as only being allowed to use a certain weapon in the game would be a fun challenge which the players might enjoy, and putting a prize at the top for the winning team would also be a motivator.

For cryptocurrency workshop, having a guest speaker with insight of cryptocurrency would be appealing as it would provide hands on experience about cryptocurrency and the market to the participants.

4) The theme that I have chosen for the team tech trivia/debate, such as the IOS vs Android debate has a lot of history behind it, and it has a lot of people still quarrelling to this day about which one is the superior software. This would be a fun topic as it would form groups automatically as per their preference. On the other hand, having a gaming competition with challenging and fun rules would be unique as it would get very competitive to perform under a set of rules.

5) I would take on the responsibility, wherever required, to ensure the smooth functioning of the events and keep in touch with every single team member and members from other departments as and when required, and analyse the entirety of event planning thoroughly to make sure that the functioning takes place smoothly without any issues and try my best to

make it an enjoyable experience for everyone in the team and for the participants.
